Dear Mr. Maravgakis

We hereby confirm that the product ADDINOL Eco Gear 320 S can be used in gear boxes and units for which the OEM manufacturer instructs the application of a lubricating oil which is in accordance with DIN 51 517-3 (CLP).

Based on a professional application, ADDINOL Eco Gear 320 S protects reliably the neuralgic points especially from the range of mixed and dry friction. Innovative additives prevent micropitting and formation of pitting. Areas which are partially superficially damaged will be smoothed by the application of ADDINOL Eco Gear 320 S. Due to the decrease of the power loss of the gear box, the smooth running characteristic of the gear box will be supported.

The positive characteristics and product advantages of the ADDINOL Eco Gear range reflects in official approvals of well-known OEM manufacturer like:

- WINERGY (SIEMENS)
- EICKHOFF
- METSO DRIVES
- VOITH WINDRIVE
- PIV BREVINI
- HANSEN TRANSMISSION
- BOSCH REXROTH (L + S)
- JAHNEL KESTERMANN

ADDINOL herewith declares to take over responsibility and liability for any damages caused by the usage of its lubricants and related to the promised (but about lack of) properties of our listed ADDINOL lubricants under our operational product liability insurance.

Best regards
ADDINOL Lube Oil GmbH
